**Plastic Fiber Optic 155 Mbps Photologic Detector IF D98**

**DESCRIPTION**

The IF-D98 is a very high-speed photologic detector housed in a “connector-less” style plastic fiber optic package. The detector contains an IC with a photodiode, linear amplifier and Schmitt trigger featuring an PECL logic compatible totem-pole output. Optical response of the IF-D98 extends from 400 to 1050 nm, making it compatible with a wide range of LED and laser diode sources. The detector package features an internal micro-lens, and a precision-molded PBT housing ensures efficient optical coupling with standard 1000 μm core plastic fiber cable.

**APPLICATION HIGHLIGHTS**

The fast transition times of the IF-D98 make it suitable for high-speed digital data links. Link distances in excess of 75 meters at data rates of 155 Mbps are possible using standard 1000 μm core plastic fiber and an IF-E99 LED. The integrated design of the IF-D98 provides simple, cost-effective implementation in a variety of digital applications.

**FEATURES**

- No Optical Design Required
- Mates with Standard 1000 μm Core, 2.2 mm Jacketed Plastic Fiber Cable
- Internal Micro-Lens for Efficient Coupling
- Inexpensive Plastic Connector Housing
- Connector-Less Fiber Termination and Connection
- Interference-Free Transmission from Light-Tight Housing
- Totem-Pole Output

**MAXIMUM RATINGS**

\( T_A =25^\circ C \)

- Operating Temperature Range \( T_{OP} \) .................-20° to 70°C
- Storage Temperature Range \( T_{STG} \) .................-40° to 85°C
- Soldering Temperature \( 2\text{mm from case bottom} \) \( [T_S] \) t ≤ 5 s.........................240°C
- Supply Voltage, \( V_S \)............... -.5 to 7 V
- Power Dissipation \( (P_{TOT}) \) \( T_A=25^\circ C \) ............250 mW
- De-rate Above 25°C ......1.7 mW/°C

**CHARACTERISTICS** \( (T_A =25^\circ C) \)

**NOTES:**

1. Input signal at 156 Mbps (Bi-phase signal)
2. 3 pF capacitor as load (including parasitic capacitance such as probes, connectors, and PCB patterns)
3. Optical input waveform is generated with IF-E99 LED
4. Average value, measured using plastic fiber (MH4001 by Mitsubishi Rayon)
5. 3 kΩ resistor externally connected to Q and Q
6. Bi-phase signal; NRZ conversion
7. With DC light, no light, and modulated light below 4 Mbps the high and low levels cannot be discerned.

**CAUTION:** The IF D98 is ESD sensitive. To minimize risk of damage observe appropriate precautions during handling and processing.
**Fiber Termination Instructions**

1. Cut off the ends of the optical fiber with a single-edge razor blade or sharp knife. Try to obtain a precise 90-degree angle (square).
2. Insert the fiber through the locking nut and into the connector until the core tip seats against the internal micro-lens.
3. Screw the connector locking nut down to a snug fit, locking the fiber in place.

**Specifications**

Specifications are believed to be accurate but are subject to change. Industrial Fiber Optics assumes no responsibility for the consequences of using the information provided beyond replacement warranty for products not meeting stated specifications. Industrial Fiber Optics products are not authorized for use in life support applications without written approval from the President of Industrial Fiber Optics Corporation.

**CAUTION**: To avoid degraded device life due to package stress, do not bend or form leads outside the orientation shown on drawing.

- Ensure that solder flux does not migrate into the device and block the optical path, degrading the performance.
- If washing the device, liquid may become trapped in the part cavity. Ensure that all potentially corrosive materials are flushed out of the device.
